### FULLY AUTOMATED: "PLUG & PLAY"

The ZMA-ANW series are commercially designed to generate on-site, cleaning, disinfecting and sterilizing solutions out of ~0.2% salt brine (NaCl or KCl). This series offers lower Salt (2g/L) and power consumption as then conventional units as well as 20x the concentration of Catholyte for aggressive cleaning. Each unit uses dual cellpolymer or ceramic membranes, and inner cooling circuit to separate positive and negative ions for consistent results. Specialized models with stronger concentrations along with other accessory features and custom options are available!

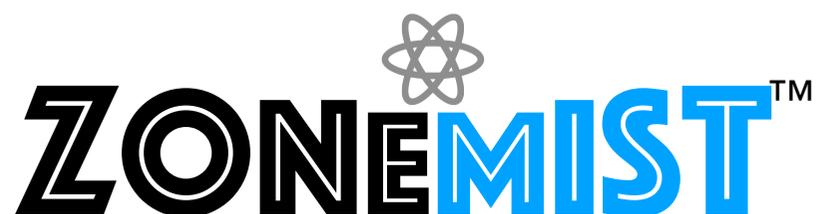

#### KEY FEATURES

- Touch Screen & Easy to Use
- Safe 500ppm Neutral HOCL
- Fully Automatic operation
- Industrial Sizing & Quality (up to 1200L/H Capacity on a single cell) • Standard 4-9pH Settings range
- Simplified Advanced Design
- Durable Grundfos Brine Pump
- Lower Salt & Power Consumption • Higher Catholyte Concentration

#### ADDITIONAL OPTIONS

- Ethernet Remote Access
- Automatic Descaling
- PH Sensor for Easy Adjustment

**Safe, Effective & Non-toxic - Excellent Return on Investment**
